

Welcome
to today's #P4A25
Workshop "AI-Coding"
29.8.2025

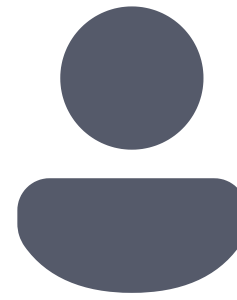

www.AGILE.COACH

Dr. Timon Fiddike, CST
Email: timon@agile.coach
Web: [agile.coach](https://www.agile.coach)
Connect on LinkedIn: [TF](#)

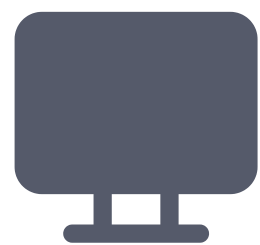

Tech Setup 1

Get things running in parallel to the intro ...

- AWS machine start + verify (4-7 min)
- ...

Processes

Disadvantages / Risks of AI-Coding

Disadvantages / Risks of AI-Coding

Code is hard to
impossible to maintain
by humans

Losing track / not
understanding what's going
on any more

Humans
can't supervise
if it writes
faster than
they can read

Lack of
trustworthiness

Lack of
transparency

Dependency

inefficient code?
overly-created code

We start
sticking
onto the
same coding
patterns & / or?
→ creative solution

AI Trained
on garbage
⇒ garbage

BROKEN
CODE

SECURITY
BREACHES

Gaps in between
the components
Speed
Security

Others can
redo my
App / Ideas
fast

BIAS

SECURITY
ISSUES

BUGS

writes bad
code faster
than humans
can fix it

Randomly
generated
cognitive load

Unclear
data
Security

Bad
Maintenance
of the code

Performance
issues

Unclear
UX

Coding pre se

Waste of time
(humans testing,
correcting etc.)

Product Management

Flood of useless
features

Specification by Example

1	2	4	8	16	32
1	2	3	5	8	13
1	2	3	4	5	6

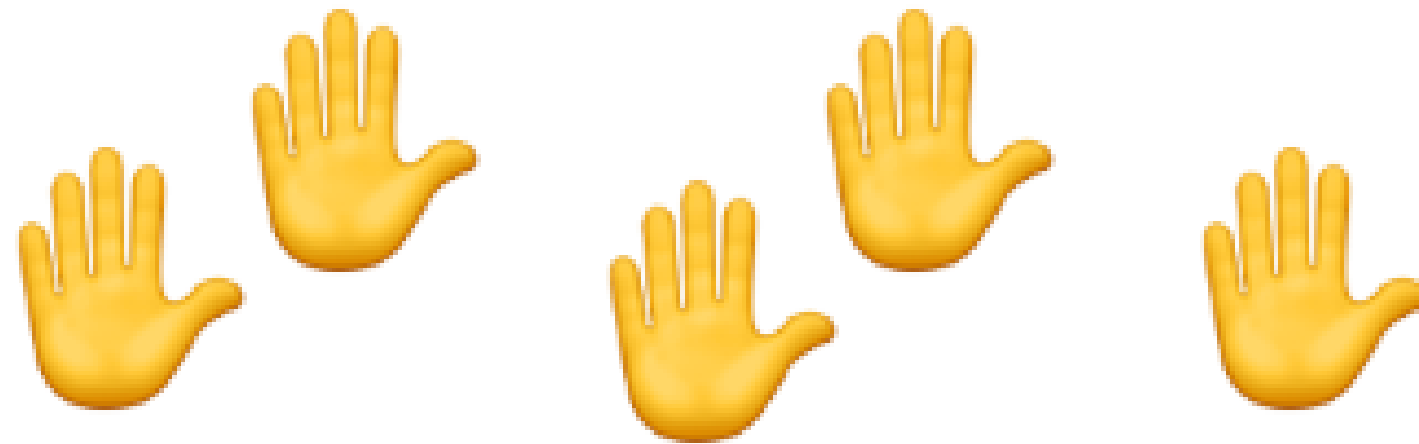

"I have seen it" vs.
"I understand" (today)

Tech Setup 2

Get things running in parallel to the intro ...

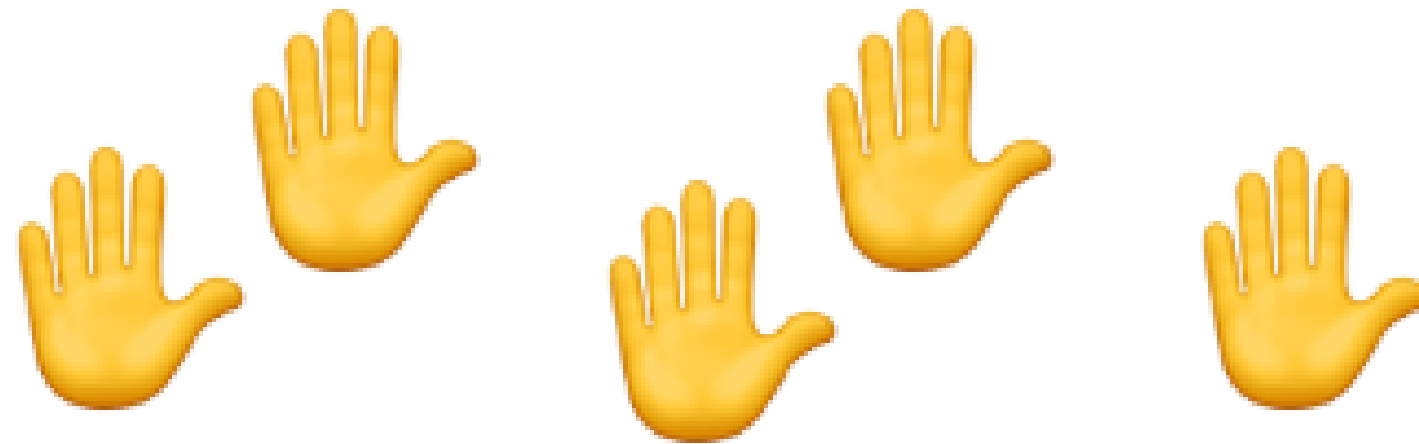

- ~~AWS machine start + verify (4-7 min)~~
- Webserver start
- [Radare-Export-Demo](#) baseline Prompt (3 min)

Who has done AI Coding via ...

- 1: Copy & Paste with ChatGPT
- 2: AI Code Completion
- 3: IDE with AI Chat und Agent
(plugin or native)
- 4: AI Agent with Auto-Run
